Instructions for using the application.

Once you run the application it will ask you to choose between hiding a secret message into an image or extracting the message from an image. You choose by entering the number next to the option.

```
-----  
Enter what you wish to do  
1: hiding a secret message into an image  
2: extract a secret message from an image  
input the number of your choice :
```

If you chose option 2 then skip ahead, otherwise then continue reading.

If you choose option 1 then the application will ask you to input a Bmp image. The image must be in the same file as the application.

```
-----  
Enter the bmp image you wish to hide the secret text in. The image must a bmp image  
Enter BMP file name: █
```

After Entering the Bmp image, the application Will tell you the name of the file selected, and would tell you the max character limit for this image:

```
-----  
Enter the bmp image you wish to hide the secret text in. The image must a bmp image  
Enter BMP file name: Envy 2  
You have selected: Envy 2.bmp  
max character size: 115199  
-----  
Enter your text input method. note: both inputs only support the english language  
1: inputing text manually  
2: inputing a text file that contains the text  
input the number of your choice : █
```

Note that you don't need to add .bmp to the end of the image name when entering the input, The application does that on its own. Note that the image must be in the same file as the application.

You now need to choose between entering the text manually (Ctrl + V would still work) or inputting a text file.

If you choose option one, then you will be asked to enter your text. You will also be told about your character limit again.

```
-----  
You have chosen to enter the text manually  
Input your secret sentence. The inputed image can only take 115199 characters : █
```

If you chose to input a text file instead then you would be asked to enter the file name.

```
You have chosen to input a text file
Enter the name of the text file: 
```

Note that the text file would need to be in the same file as the application.

Finally, you would be asked to name the exported file. Once again you don't need to add .bmp at the end of the name, the application does that on its own.

```
-----
Name the exported file. note: if a file already has this name then it will get overwritten: 
```

Choice one completed.

```
-----
Name the exported file. note: if a file already has this name then it will get overwritten: Envy 3
Envy 3.bmp
File Envy 3.bmp is succesfully created
```

Now if you chose to decode an image (Option 2)

You will be asked to enter the name of the bmp image. Note that the image must be in the same file as the application, and that you don't need to add .bmp at the end.

```
-----
You choose extracting a secret message from an image
-----
Enter BMP file name: 
```

After inputting the image, it would tell you the name of the file inputted and the secret message right under it. In my case "Good job" was my secret message.

```
Enter BMP file name: Envy 3
You have selected: Envy 3.bmp
Good job
```
